

The employee of Turkish Doping Control Center should know that it should put effort and work more productive and rationalist in order to find a place in the developing World.

For this purpose, working conditions should be systematic and well planned. If the employee is always ready to do his best, Turkish Doping Control Center will have the highest quality and technology necessary to be one of the best in the World in doping control analyses. The principles needed are listed below:

- All personnel in duty should learn quality documentation,
- Should apply politics and procedures in their work,
- Should increase the quality of laboratory work,
- Should meet client needs in maximum,
- Should carry out analyses using accurate and valid methods by using in-house methods,
- Should make independent decisions, should avoid behavior affecting judgment and credibility,
- Should protect confidentiality of doping control center analyses results, to work flawlessly and professionally,
- Should use other doping control system resources and scientific findings productively,
- Should create a love and respect environment in order to provide a pleasant relationship between employees,
- Should disseminate collaborative work,
- Should provide full attendance,
- Should embrace total quality sense as a life style,
- Should check up procedures regularly,
- Should control, develop and revise,
- Should provide continous development and efficiency.

I am sure every employee will fulfill these requirements.

I declare that all doping control activities of Turkish Doping Control Center are carried out within the scope of ISO 17025, flexible extensive accreditation, WADA ISL (International Standards of Laboratories), WADA technical documents, WADA ethics code and WADA rules and that Turkish Doping Control Center employees will be objective in their decisions.
